

Ward Group Recognizes Top Performing Insurers

Annually, Ward Group analyzes the financial performance of over 3,000 property-casualty insurance companies domiciled in the United States and identifies the top performers. This group is called the Ward's 50 for the year. Each Ward's 50 company has passed all safety and consistency screens and achieved superior performance over the five years analyzed. The Ward's 50 property-casualty insurance companies produced a 18.7% return on average equity from 2002 to 2007 compared to 14.6% for the property-casualty industry overall.

Over the last decade, the insurance industry has changed dramatically with new technology, changing customer and employee demographics and increasingly competitive market conditions. "It is important for companies to remain focused on meeting revenue goals while maintaining an efficient operating model that enables them to meet customer demands," explains Jeff Rieder, President of Ward Group.

"The best companies excel at balancing expense management, technology deployment and customer service." Results from the Ward Group Benchmarking Programs confirm these findings and identify other best practices that set top performing companies apart from the rest of the industry.

Expense Management

With added pressure on profit margins, it is more critical than ever to find ways to operate more efficiently and cost effectively. For most insurance companies, the largest operating expense is the cost of employees. Getting the most out of this high dollar investment is a best practice at top performing companies. The average Ward's 50 company processes 12% more policies per employee and maintains a 10% lower expense ratio. The average compensation, including salary, benefits and bonus, for top performers is \$3,800 less on average. These companies are able to lower personnel costs through effective management of benefit programs, better management to staff ratios and salary programs that are fair, but not excessive, in the market. In addition to lower costs per employee and higher employee productivity, employee turnover for these companies is nearly 25% lower than the industry. "Compensation is usually a much

smaller piece to employee satisfaction than people think," said Mr. Rieder. "Most people want to work in a successful environment that is challenging and rewarding."

Technology Deployment

The business demands on information technology organizations are simple: do more with less and do it faster. But to be able to maximize improvements in technology, companies must often make decisions to change long-standing business practices. For example, many processes were created before computers were available and companies needed many field offices for staff to support customers and agents. Today, the average company annually spends over \$7,000 per employee for occupancy and related support costs. Advances in telephony, workflow management and web-based technologies have enabled companies to replace legacy systems and business practices. "Top performers deploy nearly 5% more employees working

from their homes than the average company", observed Mr. Rieder. "As a result, these companies reduce overhead expenses, achieve higher workloads and can place the critical customer-facing employees closer to where they are needed in the field." When the support savings are combined with improvements in staff workloads, the expense reductions can be significant.

Customer Service

Even as top performers look for ways to reduce expenses and bring in new technology, superior customer service and customer satisfaction remain the most important business drivers. The focus on customer needs significantly improves retention. "Top performers anticipate the needs of their customers and find ways to work with them efficiently," added Mr. Rieder. "As a result they are rewarded by keeping their business". Policy retention for the Ward's 50 benchmark continues to outperform the industry by over 5%.

2008 Ward's 50
